

## ROBOT END OF ARM TOOLING (EOAT) REBUILD PROGRAM

Schneider Packaging Equipment knows that regularly maintaining equipment is key to its longevity. Our rebuild program allows you to send in your End of Arm Tool for evaluation. See how sending your existing EOAT back to our facility for rebuild can benefit you by reducing unnecessary downtime, eliminating annoying faults, and stop increased maintenance costs.

### Each Rebuild includes the following:

- Complete analysis of your Robotic End of Arm Tool. We provide the End User with a detailed proposal of parts needed and labor to rebuild the tool.
- Repair or replace all worn or broken mechanical parts.
- Replace all electrical, pneumatic, and vacuum components.
- Replace all electrical wiring and pneumatic tubing including vacuum lines.
